Contract Manufacturing

Sustaining Engineering

Time To Market • Cost Reduction • Reliability • Quality • Customization • Next Generation • Lean Manufacture

More than just Contract Manufacturing.

Invetech is a contract product development and manufacturing company with strong in-house design and engineering capabilities, supporting manufacture of new and complex instruments. We work closely with co-located sister company, Leica Microsystems, who provide ISO13485 certified manufacturing.

For more than 30 years we have developed and manufactured products that not only lead the market, but change it.

Our success is based on:

- integrated engineering and manufacturing facilities
- a large in-house capability of over 200 design and engineering professionals
- specialist expertise and knowledge
- a consultative approach based on partnership
- lean manufacturing practices

Our proven design, engineering and manufacturing processes deliver shorter time to market, reduced risk, lower manufacturing costs and enhanced product quality, reliability and serviceability.

A Passionate Approach

We are passionate about helping our clients succeed while improving the quality of life for many people around the world through the products we help develop.

Success Stories

Bio-Rad BioPlex™ 2200 System is the industry's first fully automated, random access multiplex testing platform.

Leica Microsystems Leica PELORIS™ Dual retort tissue processor. Complex electromechanical system with best-in-class software driven fluidics scheduling and electro mechanical packaging.

Abbott Laboratories CELL-DYN SMS The world's first stand-alone fully automated slide making and staining system. The system is designed to mix, identify and aspirate blood cell samples for the purpose of hematological reference and classification.

Instruments manufactured by Leica Microsystems a co-located Invetech sister company.

bioMérieux PREVI™ Isola

A revolutionary system for microbiological specimen processing designed to complement and expand the bioMérieux automated solutions portfolio.

8 System Integrators have integrated this into their applications.

SL50 the first Automated Slide Loader instrument integrated seamlessly with a range of microscopes.

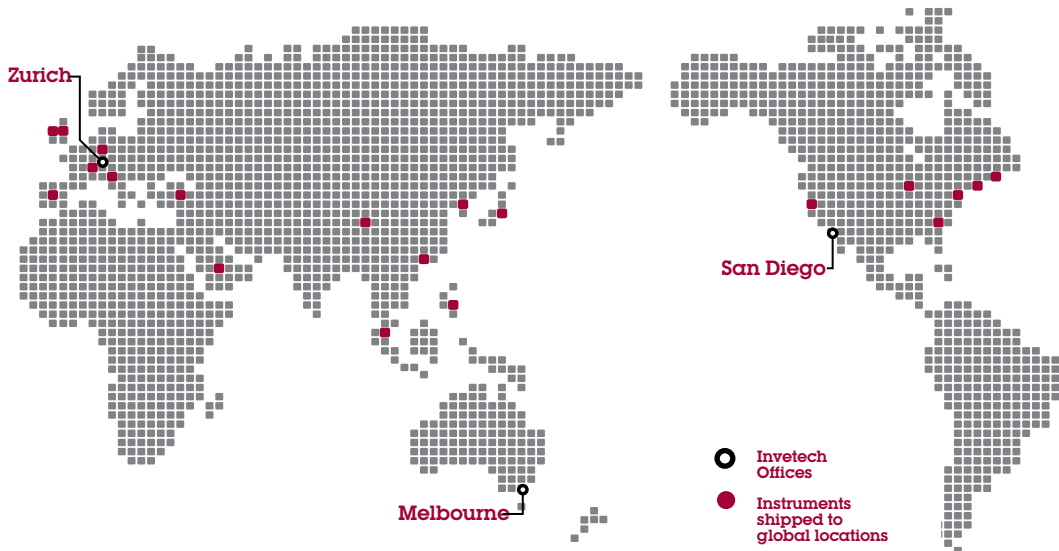

Leica Microsystems Leica BOND™

A complete system for fully automated IHC and ISH staining, with an intuitive user interface.

Global reach, global experience

We provide development and manufacturing services to clients around the globe including 7 of the top 10 diagnostic companies.

Lean
Global ISO13485 certification.
Pre-qualified, low-cost supply network.
Global partner network.
Kaizen improvement methodologies.
KANBAN (just-in-time materials supply).

Factory Statistics

Co-location with 200+ product developers.
On-site workshops and laboratories.
50,000 sq ft. (4645 sq m)
100+ production employees.

Regulatory Compliances

FDA 21 CFR 820 compliant.
ISO13485 & ISO 9001: 2008 certified production facility.
UL and CE compliance management (including UL follow up service).
