Invetech Raises the Quality Bar at San Diego facility with ISO13485:2003 Compliance

(SAN DIEGO, CA - June 4, 2009) Invetech, a leader in product development and custom automation for the medical, industrial and consumer markets, recently received the International Organization for Standardization certification for the San Diego facility, ISO13485:2003, reinforcing Invetech's signature development processes and quality management system.

President of Invetech Dr. Fred Davis explains, "Our clients rely on us to deliver a very high standard. This certification shows Invetech's commitment to meeting client and regulatory requirements, applying risk management techniques and maintaining systematic quality processes."

The assessment and certification was conducted by BSI, the leading global provider of management systems assessment and certification solutions. The certification is a cornerstone in ensuring that medical device products designed and developed in Invetech's San Diego facility consistently meet client and customer needs.

"Our clients are always welcome to audit us, but being ISO13485 certified reduces the burden for them – reinforcing our commitment to process, quality and product safety." said Dr Davis.

Invetech's San Diego facility is now formally equipped to design and develop instrumentation, medical devices and consumables for diagnostics, patient treatment, analysis, materials handling and drug development. Invetech's Melbourne manufacturing facility, which manufactures instrumentation for three of the world's top ten diagnostics companies, is also ISO13485:2003 certified.

About Invetech:

Invetech has been creating breakthrough products and custom automation systems for more than 30 years. With more than 200 staff, and experience drawn from over 5,000 projects, Invetech delivers product design and development, contract manufacturing and custom automation services to a range of global market sectors including diagnostics, life sciences, medical devices, cleantech,

industrial and consumer products. Operating out of locations in North America, Europe and Asia Pacific, our clients range from start-ups to multi-nationals.

About ISO:

ISO has developed over 17500 International Standards on a variety of subjects and some 1100 new ISO standards are published every year. The full range of technical fields can be seen from the listing International Standards. Users can browse that listing to find bibliographic information on each standard and, in many cases, a brief abstract. To learn more about ISO, please visit iso.org.
